Career Objective

Python developer with strong skills in machine learning, data analysis, and natural language processing. Focused on building efficient and accurate machine learning models.

Skills

Python, Machine Learning, Natural Language Processing, Data Analysis, Pandas, NumPy, Scikit-learn

Projects

House Price Prediction using Machine Learning

Developed machine learning models using Python and scikit-learn. Performed data analysis, feature engineering, and model training to predict house prices.

UPI Fraud Detection using Graph Neural Networks

Built a fraud detection system using machine learning and graph-based techniques. Improved detection of fraudulent transactions.

Resume Screening using NLP

Created a system to rank resumes using natural language processing. Used TF-IDF and cosine similarity for matching resumes with job descriptions.

Certifications

Introduction to SQL, Data Analytics, Machine Learning, Generative AI

Education

Bachelor of Engineering
